People, sources and versions

Version 0.8, 24 October 2026

This page lists the people and roles in the project, the sources and the version history. Each person’s rights depend on signed agreements and official records.

• What exists

• Figures and origin

• How it works

• Token and outreach

• Voice and protection

• Tools and limits

• Costs and risks

Who is contributing and which roles remain unfilled?

Person or group	Role in the plan	Authority and status
Rafael Britto	Construction knowledge, budgets and local relationships.	Rafael is a founder. His formal duties have not been put in writing, and his professional credentials need sources readers can consult.
John	Communication, documentation and coordination of digital tools.	John helps prepare the project. This reference assigns him no right to spend money or sign for IMOBX; that needs a written appointment.
IMOBX	Project organisation, agreements and account reporting.	Legal form and legal representatives are being defined.
OLYMPUS	Proposed builder, linked to Rafael; no contract signed.	Appointment depends on the agreed work, price comparison and approval by someone independent of the builder.
Residents	Housing terms and participation in shared matters.	Residents' say does not depend on buying tokens. Representatives and rules will be discussed with participants.
Community or charitable partner	Access to property, households or funders, if a partnership is agreed.	Partnership scenario under discussion. No agreement or endorsement is confirmed in this reference.
Legal advice, accounting and building inspection	Review of agreements, accounts and safety.	Responsible professionals are not yet identified in this reference.
Investors, donors and ambassadors	Funding or work under their own agreements.	No automatic control over housing agreements. An ambassador needs to disclose paid work.

The same method applies to construction and suppliers. A builder linked to a founder needs to disclose that relationship. Other people compare the price, approve the contract and inspect the completed work. Disclosure alone does not resolve the conflict of interest.

A vote, including a token vote, cannot on its own change a family's housing agreement. Residents' say does not depend on investing, and investors receive only the rights written in their agreement.

Chapters and sections

The map below follows the scope of Rafael's document. A section marked as a proposal does not become fact by being cited in the document. Rafael's roughly 30-page manuscript is in preparation.

Executive summary. Vision and mission

Housing proposal, intended participants and current stage. The final thesis depends on legal and financial decisions.

Project status

Whitepaper

Deck

The problem

Housing context and official sources. National data do not replace assessment of the participating households.

Participants and context

IBGE

Housing deficit: FJP

The solution from the resident’s perspective

Agreement, payments, repairs and whole-home purchase. Amount, term and admission criteria are set for each project.

Household explanation: payments, repairs and decisions

Household pathway

The pilot

Property, entity, use or transfer agreement and household agreement. A community partnership is a possibility under discussion.

Legal and property foundations

Planned roles

Property economics and financial model

Rafael’s budget, the different building work covered by each case and the planned use of money. A forecast of money coming in and going out, using the costs of the chosen project and different cases for delays and repairs, is being developed.

Costs and origin

The order money would be used in

Scenarios and risks

Legal structure

Comparison of social-purpose activity and investment with financial rights. The legal form, advisers and process for offering any investment are part of the legal work under way.

Token rules and the regulator

The regulator’s test programme

Social purpose and legal form

The token’s role

Token purpose and rights are under research. Payment for work and investment rights are separate relationships.

Motivation and alternatives

Rights and limits

Governance

Resident voice, roles, review and conflicts when a builder is connected to one of IMOBX’s founders. Final rules depend on participation and approval.

How shared decisions would work

Responsibilities

Technology

What Arc, USDC and the working tools are for, and their limits. The complete IMOBX operation has not been demonstrated.

Tools and limits

Money in and out

Risk and compliance

Construction, financial, housing and offering risks. Legal and security reviews remain pending. No regulatory approval is claimed.

Risks and reviewing roles

Roadmap

Stages with proceeding conditions, responsible roles and reasons to pause. Delivery dates follow confirmed appointments, budgets and dependencies.

Stages and conditions

Team, founder and partners

Current involvement and planned roles. Professional references, appointments and partner agreements need documentation.

People and role status

Conclusion and appendices

Conclusions should follow the available evidence. Sources, versions and terms are collected here. The complete financial model is not ready yet.

Sources

Terms and questions

Versions

Sources support specific claims

Reviewed on 17 October 2026. Official sources explain rules and data. They do not approve IMOBX. A provider’s documentation describes its product, without establishing an IMOBX integration. Founder-supplied figures retain that attribution.

Rafael: budget and loft account

Founder information dated 30 November 2025 and 20 January 2026. Public summary without private correspondence. It is not a final-cost report or independent assessment.

IBGE: 2022 Census, favelas and urban communities

16.4 million residents, 8.1% of the population, in the 2022 Census. This does not itself measure the housing deficit or describe each household.

CAIXA: SINAPI

Brazilian reference for construction costs and inputs. A specific budget needs a location, date and scope.

Elinor Ostrom: Nobel lecture

Research basis for shared-resource governance principles. Their application to IMOBX is the project’s proposal.

ICA: cooperative identity

Democratic member control and autonomy. Does not establish that IMOBX is already a registered cooperative.

CVM: Guidance Opinion 40

CVM, Brazil’s securities-market regulator, examines token characteristics and rights. Utility or governance labels do not authorise an offer.

The regulator’s test programme for shared digital records (CVM, 13 October 2026)

The experimental programme under article 1, paragraph 3 excludes real investors, actually issued securities and real-money movements in its tests. It does not authorise public offerings or other regulated activities.

Law 13.019: definition for public-sector partnerships

Article 2 defines nonprofit organisations for that law. The fit between social purpose and any investment offered needs specific legal review.

Arc: official documentation

Network features and tools for digital payments. Does not establish IMOBX use, partnership or regulatory approval.

Arctide · Arc-based exchange

An example of a trading platform on the Arc network. It does not establish IMOBX use.

Fundação João Pinheiro: 2024 housing deficit

An estimated 5,773,983 homes in the 2024 deficit. This measures housing needs under its own criteria. It differs from the 2022 Census count of people living in favelas.

US rules on saying when promotion is paid (FTC)

US guidance on disclosing paid relationships. It does not authorise investment offers or replace rules in other countries reached.

X’s rules for paid partnerships

Requires paid-partnership disclosure and prohibits content categories. Country rules include crypto and financial products in the EU, UK and Australia. A disclosure does not make prohibited content permissible.

Argus · Arc-based exchange

An example of a trading platform on the Arc network. It does not establish IMOBX use.

How to cite this reference

Citation format: IMOBX, Project reference, v0.8, reviewed 24 October 2026, followed by the section title and link. The version file identifies documents in this edition. The date records content review. It does not confirm publication, signature or construction start.

Each correction needs a date and a named source. A new decision also needs the name of the person who approved it and a link to its basis.

In this edition, founder figures remain attributed to him. The site does not automatically monitor balances or legal changes.

Update record

2026-10-24 An invitation to the founding circle. The site now speaks first to people who could help found the cooperative. New sections: Why housing, the three phases of growth, how money would be used and contact on Telegram. The families' protections did not change.

2026-10-21 Pages reorganised for families. The explanations for families were rewritten in plain language; the questions about funding, tokens and governance moved to this page; the menu now has six items; the text of the documents was revised. No figures, facts or open decisions changed.

2026-10-17 Outreach and token alternatives. Reports would show the money set aside for outreach, payments for completed work that has been checked, and money needed to keep promises to families. The rules are still being developed.

2026-10-16 Payment-plan status. Families would pay in reais. Any conversion would depend on an approved use and a provider that accepts the organization. No choice or working operation is confirmed yet.

Manual review: prices, provider rules and balances are not monitored automatically. We will update this page with dated confirmations, tests and reports when available.
